

Appendix C

Example operation of the CICAS-SSA system as illustrated on Figure 2 of the Gorjestani et al. (2008) Report. [Source: Gorjestani et al., 2008]

Note: The legend under Figure 2 of the Gorjestani et al. Report (p. 6) reads: Prototype DIIs presently tested in the HumanFIRST driving simulator. Upper left represents the Countdown DII in an alert mode (11 seconds to the vehicle approaching from the left); the upper right indicates a warning mode (red background, white letters indicating 5 seconds to the vehicle on the left). Lower left shows an alert mode (traffic approaching from the left), and the lower right shows a warning mode (vehicle too close from the right). If realized at an intersection, the countdown sign would measure 2.2m wide x 2.5m high; the icon sign would measure 3.3m wide x 2.6m high.
